FORMULATION ADVICES: Laboratory scale - 2 kg - Dumek - Rotor-stator

Incorporate the water of phase A into the main tank. Disperse Sclerotium gum and stir until the gel is homogeneous. Heat the gel up to 80°C. In a separate vessel, prepare phase B (heat the water up to 80°C, add phase B ingredients in the right order (as listed in the procedure) and stir until the solution is clear). Add phase B onto phase A and mix well. Heat phase C up to 80°C and add phase C onto phase A+B and start emulsifying. Start cooling down. At 40°C, add phase D ingredients in the right order and mix well.

A gentle cleansing & make-up remover milk

The formula is suitable for sensitive skin!

Thanks to the green emulsifier **MONTANOV™ L**, the skin is well-moisturized & the formula has a light skin feeling.

(C14-22 Alcohol - C12-20 Alkylglucoside)

Glucolipid emulsifier in harmony with the nature. It is really useful to **synthesize fluid formulas**, no matter the nature or the quantity of fatty phase used. It allows to **stabilize emulsions**, and has a **strong moisturizing power** since it promotes liquid crystals which prevent the skin from dehydration (efficacy proven *in vivo*).

LIPACIDE™ C8G ensures that your formula is ok for sensitive skin: the cutaneous pH is well-balanced & a minor concentration of preservative is added. (Capryloyl Glycine)

It is a glycin biovector & skin acidifying agent which **protects the skin & enables to maintain its ecosystem**. It also protects cosmetic products by **increasing the microbiological stability** of low-preservative formulas.
